

GET THE ANSWERS YOU NEED TO MAKE AN INFORMED DECISION ABOUT FULL-ARCH BRIDGES

Teeth Forever Answers	Other Option Answers/Notes
<p>1) How many appointments are required?</p> <p>After your Free Initial Consultation, there are as few as four appointments in the Teeth Forever® Process.</p>	
<p>2) How many different clinics will I need to visit?</p> <p>One. All your Teeth Forever® appointments are in the same dental clinic.</p>	
<p>3) How often do patients need bone-grafting to support the dental implants?</p> <p>The Teeth Forever® process virtually eliminates the need for bone-grafting in most patients, however, it may be required for patients with extreme bone-loss.</p>	
<p>4) How many dental implants will support my full-arch bridge?</p> <p>We have demonstrated a 100% success rate using 6 implants for upper bridges and 5 implants for lower bridges, but your Teeth Forever® Advanced Implant Dentist will determine the precise number of implants your specific case requires.</p>	
<p>5) How long will I be without teeth?</p> <p>Overnight. With Teeth Forever® your extractions are performed and implants are placed on the first day, and you get a chance to heal overnight. The following day, your customized, lab-produced temporary bridge is attached to your implants, and you leave with a beautiful smile.</p>

6) Will I have a temporary bridge prior to my final bridge?

Yes. The bridge you receive the day after your implants are placed is called a Provisional. You also are free to go home and rest immediately after implant placement, so you don't need to wait in the dental clinic.

7) How soon until I get my final bridge?

You'll wear your Teeth Forever[®] provisional bridge for 3 to 6 months while your implants stabilise and you become perfectly accustomed to a full-arch of teeth and gums.

8) What materials are used in making my bridge?

Your Teeth Forever[®] final bridge is custom milled from a solid piece of Prettau[®] Zirconia. It is hand-crafted to your unique smile specifications and natural looking colour shades are permanently absorbed into the bridge prior to furnace curing and final polishing.

9) How long is my bridge going to last?

Your Teeth Forever[®] Prettau[®] Zirconia bridge is designed to last a lifetime. Of the Prettau[®] Zirconia bridges produced by the lab that provides all Teeth Forever[®] final bridges, none have been returned.

10) Will my bridge ever become discoloured or attract and retain odours?

Prettau[®] Zirconia is non-porous, so it doesn't stain, discolour, or retain odours. You care for this bridge just like natural teeth. Other bridge materials such as acrylics with porcelain denture teeth attract both stains and odours.

11) Will my bridge attract plaque and harmful bacteria?

Just as Prettau® Zirconia is resistant to stains and odours, its non-porous nature doesn't attract plaque (and the harmful bacteria that breeds in plaque build-ups).

12) What is the chance that my bridge will chip, crack or break and need to be replaced?

The results of the 5-year study of 2,039 Prettau® Zirconia full-arch bridges produced by Tischler Dental Laboratory show the chances of chipping, cracking, or breaking are 0.44%.

13) Will my bridge weaken or wear down from chewing and talking?

Your Teeth Forever® Prettau® Zirconia final bridge is not only extremely resistant to chipping, cracking and breaking – Its industry-leading durability shows no weakening or wear from chewing and talking, even in patients who grind their teeth.

14) What's the chance that I will develop an infection under my bridge?

Infections are caused by bacteria. The fact that Prettau® Zirconia does not attract plaque and harmful bacteria means there is minimal risk of developing an infection caused by the bridge.

15) Does your clinic provide ongoing hygiene and full-service dental care?

Every Teeth Forever® Member Practice provides comprehensive dental care and hygiene treatments in the same clinic where your bridge procedure is performed.

16) May I see a study of the long-term success of my bridge published in an accredited professional journal?

A study of 2,039 full-arch Prettau® Zirconia bridges is published in the Journal of Prosthetic Dentistry documents a less than one half of one percent failure rate for all patients in the study. Be wary of any study of under 100 bridges.

Teeth Forever Benefits

Other Option Benefits

As Few as Four Appointments in a Single Location

Rarely Requires Bone Grafting
